

## Massive attacks on Zoom Thanksgiving meetings

[The Analyst](#) shared information about the attack after receiving hundreds of emails from this campaign targeting companies.

The phishing attack pretends to be from Zoom and states, "You received a video conference invitation," with a link that can be clicked on to review it, as shown below.

Clicking on the link will open a fake Microsoft login page hosted on Google's appspot.com domain. The phishing page will automatically have the targeted user's email address inputted into the phishing landing page and prompts the user to enter their password.

Microsoft login phishing page

When users enter their password, the phishing page will log the victims' email addresses, passwords, IP addresses, geographic location, and whether the login credentials could successfully login to the email account.

TheAnalyst told BleepingComputer that the phishing pages are verifying credentials as they are entered by attempting to log into their accounts via IMAP.

At the time of this writing, BleepingComputer has been able to verify that this phishing attack has stolen over 3,600 unique email credentials. As many landing pages are used in this attack, the amount could be far more massive.

## **Recommendation**

Everyone must be cautious regarding any Zoom invites they receive. If they look like the phishing email above, or if you click on a meeting invite and it asks you to enter your login credentials, immediately **STOP** and close the web page.

Clicking on a Zoom invite link should open the app, not bring you to another web page asking you to login. If you have accidentally fallen for this attack, you should immediately contact your organization's administrator and change your password.

For those celebrating Thanksgiving, have a nice holiday, but be safe as well. Cyberattacks are commonly conducted on the holidays when defenses are down, and staff is limited.
